

Machined parts

Machined parts

We manufacture components of all sizes

Kilkanen Oy is a competitive and efficient company which is specialized in machining. We have made machining for more than 40 years and are able to deliver even the most demanding entities. We engage in continuous development work to ensure and improve quality.

We manufacture all sizes of components from different raw materials. In addition to serial production we also deliver larger entities. The ordered high-quality machined products are produced for our customers by our very proficient employees. We produce more than 2,000 titles annually, and our overall production exceeds 300,000 units per year. The parts we manufacture are used in demanding conditions. Therefore, they are required to have a long life expectancy, high wear resistance and, naturally, good reliability.

Our machine base is modern and efficient, and the continuity of production has been ensured with reserve engine thinking. In production we use, for example, CNC lathes, machining centres, broaching drills, portal centres, boring and turning mills, and hobbing machines.
